Record order intake already reached at LIGNA: HOMAG Group breaks through the 100 million Euro mark

New project order intake record: Already after little more than four months into the year, the HOMAG Group has already broken through the 100 million Euro ceiling. The world market leader supplies its plants to customers from the global furniture, flooring and structural element industry. In short: Customers the world over place their trust in the plant engineering competence and innovative drive of the HOMAG Group.

“The HOMAG Group has made a tremendous start to the new year, already exceeding our targets during the first few months and we were able to pass the 100 million Euro ceiling at LIGNA”, reports Board Member for Sales, Service and Marketing Jürgen Köppel.
Frieder Schuler, Head of the HOMAG Group Engineering furniture team adds: “Renowned manufacturers such as Bribus from Holland, Friul Intagli from Italy, Formaplan from Germany, Metal Systems from Belgium, Nowy Stil from Poland, Red Apple from China and Stilnye Kuchni from Russia are among countless other customers who rely on us as a trusted partner and on integral solutions from the HOMAG Group – and not just when it comes to processing wood.” Examples from other fields include a renowned manufacturer of cement fibre board from Thailand, which invested an amount in the mid single-digit million Euro range in a production line for fibre cement elements of the kind used in facade cladding or flooring. This plant is used to divide large-scale boards, and to size and profile the individual components. The boards are then stacked into books and packaged. “No matter what the requirement, we will find a solution. Put simply, I would say: put us to the test – we will deliver!” adds Schuler.

The order volume also includes plants for processing the entire furniture industry spectrum – from series production through to batch size one. Also

included in the portfolio are plants for glulam (glued and laminated timber) board processing and for laminate, parquet and LVT flooring production. Alongside the design and implementation of complete new plants, the HOMAG Group is also an expert when it comes to investment in upgrading and renewal within existing production lines.

Specialist expertise, enthusiasm and close cooperation with the customer are key to the achievement of outstanding performance. Added to these benefits is sound advice based on many years of experience, alongside thorough knowledge and understanding of the industry and its needs. The members of the HOMAG Group Engineering team come with a firm grasp of all these core elements. Its ability to offer the widest product range available from a single source, its integral control philosophy and a portfolio of highly efficient services make the HOMAG Group the number one port of call to industrial and woodworking shop customers the world over.
