

## **Sawing, drilling and routing – now fully automated with multiTec**

### **INVITATION**

To all manufacturers of facades  
and partition walls

Experience multiTec live!  
At HOLZMA Treff  
from 23 to 26 Sept. 2014

# What is multiTec?

Do you manufacture facades, partition walls or concrete formwork? If so, the **HOLZMA HPP 300 multiTec** is just the thing for you. This is because the saw completes three processing steps in one pass – automatically and precisely: sawing, drilling and routing. Ready-to-assemble elements are the result. You save a considerable amount of time and money in handling.

Curious? Then put your questions to our Sales Director Christof Stadel and his team. Simply give us a call on +49 7053 69-0. We look forward to hearing from you.

# Who is HOLZMA?

**HOLZMA is the world's largest manufacturer of panel dividing saws and systems, as well as the corresponding software solutions. The company, located on the edge of the Black Forest, has been in the business for nearly 50 years and has approximately 420 employees. In recent years, production facilities have also been established in Barcelona, Shanghai and Sao Paulo.**

HOLZMA started out as a family business. Today, HOLZMA is a member of the HOMAG Group. This brings clear benefits for customers: Highly compatible system solutions, for example saw-storage combinations, ensure

hardware and software integrate perfectly. And HOLZMA benefits too – from the industry's strongest sales and support network. This allows us to be on the spot quickly, in any part of the world.

# What does it cost to drill a hole, Mr Leopold?

Holzbau Leopold GmbH & Co KG is a typical timber construction company. Its services include carpentry and timber framework, as well as facade construction. Walter Leopold, the owner, spoke to us about his experience with the new HPP 300 multiTec.

## Why did you opt for HOLZMA and the new HPP 300 multiTec?

“Although I knew HOLZMA by name, I had no experience at all with HOLZMA products. What really convinced me about the HPP 300 multiTec was the high processing speed. Another enormous benefit is the low dust formation – this is achieved on the one hand by the powerful extraction system, and on the other by drilling being completed from below, which means that practically no dust collects on the panel.”

## What materials do you process on the new machine?

“We use the HPP 300 multiTec 80 percent of the time for processing steps in constructing facades and 20 percent for timber work. We process a wide range of materials for facade construction. They include, for example, fiber cement panels and HPL panels made of plastic laminate, as well as Alucobond panels and, of course, all the usual wooden materials. Our multiTec copes with this diversity without any trouble.”

### What does it cost to drill a hole, Mr Leopold?

“Production costs for drilling a hole manually are about 1.10 to 1.20 euros. Now multiTec does the drilling fully automatically, thus halving our costs per hole. They are now only about 60 cents.

There are also other important advantages, one being that I no longer need to clean the surfaces of the processed parts, simply because they leave the machine clean. We used to drill holes on the building site – nowadays the panels go out ready for assembly. This speeds up assembly and makes us independent of the weather for manufacturing and fitting.”

# Invitation to HOLZMA Treff

The in-house exhibition **HOLZMA Treff** takes place once a year. In an informal atmosphere, you can take a look at our latest developments and best-selling models and chat with our sales advisors and specialists for software and services. Also to be seen in action this year: the **HOLZMA HPP 300 multiTec** with routing and drilling unit especially for facade construction.

Take advantage of this opportunity.  
Come and visit us.

**HOLZMA Treff**  
23 to 26 Sept. 2014  
9am to 5pm daily  
Holzmastrasse 3  
75365 Calw-Holzbronn
