## **Deal of the Year - WEEKE Venture 211 Edition CNC Processing Centre**

Every once in a while, one of the brands within the HOMAG Group draws up a generous specification for a machine which is put on sale at a very special price. Offering real value for money, it is only available, however, for a limited time period. Recently WEEKE, the Group's specialist processing, drilling, routing and grooving CNC manufacturer, announced the latest in a line of 'Edition' promotional models, the WEEKE Venture 211 edition.

Simon Brooks, sales and marketing director of HOMAG UK comments, "The 'edition' models offer customers a fantastic package, but they are only available for a relatively short period. I would urge companies interested in this great value CNC processing centre package to contact us sooner rather than later if they want to take advantage of this excellent deal."

### **Perfect for kitchen, bedroom and office furniture production**

Simon continues, "The Venture 211 edition is an extremely versatile machine and is a perfect addition to both joinery manufacturers and panel processing companies alike.

"This model has been configured with a powerful 12kW HSK routing motor for fast, accurate processing. It comes with WEEKE's dual circuit tubeless vacuum pad clamping system and its highly accurate LED positioning system for fast set-ups. It also has 18 drilling spindles, twelve vertical and six horizontal, a 125mm grooving saw and a 14-fold tool changer for quick, versatile production.

"The high speed drilling spindles feature the patented quick change system to minimise downtime and also boast the patented automatic spindle clamping system which guarantees exact drilling depth at any time with different materials. Weighing in at just under five tonnes, the Venture 211 Edition is an absolute workhorse."

### **Total control at the touch of the screen**

“Following the successful path pioneered by the HOMAG Group, the Venture 211 edition features a 21” full-HD multi-touch wide screen display panel. Known as **powerTouch**, it is the next generation control system with a completely new user interface.

“The large, widescreen multi-touch monitor is at the heart of this technology and the machine functions are easily controlled by directly touching it. The cutting-edge interface offers an array of new help and assistance functions designed to radically simplify working practices.

“The standardising of operating elements and software modules ensures that all HOMAG Group machines can be operated using the same processes with **powerTouch**. This standardisation not only simplifies the operating of different machines, but also makes for greater efficiencies by significantly reducing the time required for servicing and training.”

### **Driven by the market-leading woodWOP software**

With over 35,000 installations, **woodWOP** is the most successful programming system on the market. The innovative user interface centres on the large graphic area used for displaying work pieces in 3D.

The processing parameters can be entered and realistically displayed graphically to program trimming and drilling operations and saw cuts quickly and simply. This ensures optimum programming reliability and ongoing checks throughout the programming process.

“This ‘edition’ model really is a value for money package,” concludes Simon Brooks. “Production of these machines is bound to be snapped up quickly, so those wishing to discover the amazing price tag for the WEEKE Venture 211 Edition or to arrange a demonstration should call Karen Payen at HOMAG UK on 01332 856500 as soon as possible.”
