Beam Processing Center WBS 140

Whether for roof trusses, beam processing or complete timber houses - the WBS 140 will make your work easier.

The WBS 140 is a beam processing machine for carpenters.

Flexible

The 8-fold tool changer in combination with a 5-axis aggregate ensures multifaceted processing of different work pieces and flexible working at a technologically advanced level.

Accurate

Through the NC gripper with its highly accurate positioning system and high-precision guidance the work pieces are processed accurately.

LIVE DEMOS !

Combi Wall System WEK 100

The Combi Wall System for the construction of timber frame elements.

The WEK 100 is only slightly larger than the WEINMANN working tables and enables the automatic manufacturing of complete elements with only one operator.

Panel Processing Center WMP 240

This machine has been developed for the fully automatic processing of solid wood panels (glue lam board, sandwich elements, magnum board, etc.) used in solid wood housing construction.

Timber frame in-house trade show

Find out about the flexible and individual solutions in wood construction.
